

CKA Birla Group

Low Noise Low Vibration Bearings

Quiet confidence in every rotation

Low Noise Deep Groove Ball Bearings are designed to help machines run smoothly with minimal vibration and sound. With refined geometry, smooth raceways, and special low-noise lubrication, these bearings offer stable, silent, and long-lasting performance. They are ideal for applications where quiet operation and efficiency are essential.

Key Features

Ultra-Low Noise Performance

Ultra-Low Noise Performance

Special raceway finishing and precision ball grading significantly reduce operational noise, making them ideal for electric motors and pumps operating in noise-sensitive environments.

Reduced Vibration Levels

Optimized internal geometry and strict manufacturing tolerances minimize vibration, resulting in smoother operation and longer component life.

High Speed Capability

Designed to perform reliably in high-speed applications, ensuring stable operation even under demanding conditions.

Superior Surface Finish

Advanced grinding and polishing processes ensure excellent raceway surface finish, reducing friction and wear.

Consistent Quality

Manufactured under strict quality control standards, ensuring uniform performance across every bearing.

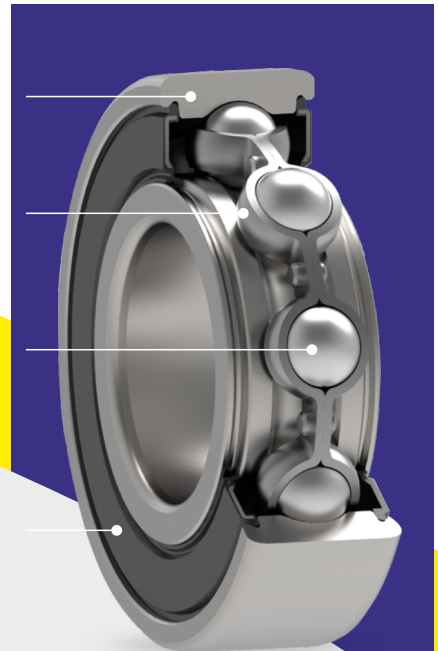

High quality surface finish

Tighter accuracies and controlled vibration

Optimized internal geometry

Low noise lubrication

Benefits to Customers

- ✓ Quieter Equipment Operation
- ✓ Longer Bearing Life
- ✓ Reduced Maintenance & Downtime
- ✓ Reliable Performance in High-Speed Applications

Applications

- ✓ Electric Motors
- ✓ Home appliances
- ✓ EV components
- ✓ HVAC & Ventilation systems
- ✓ Medical & Laboratory equipment
- ✓ Robotics and precision equipment
